# Why Charcoal Briquettes?

	Reuse Product	Monthly Revenue from 600 tons FS
Curren t Fuel	Charcoal Briquettes	\$140,000
Solid Fuels	Uncarbonized Industrial Briquettes (Sawdust + Dried Feces)	\$40,000
	Carbonized Biomass + Feces Binder (Carbonising cost \$75/ton)	\$140,000
	Dried Feces Fuel	\$2,500
Non-Solid Energy Products	<b>Biogas to Electricity</b> (selling electricity at end consumer price)	\$2,000
	<b>Biogas To Electricity with Food Waste</b> (selling electricity at end consumer price)	\$8,000
	<b>Biogas to Compressed Gas</b> (Selling at equivalent price to LPG)	\$3,000
	<b>Biogas to Compressed Gas with Food Waste</b> (Selling at equivalent price to LPG)	\$30,000
	VIP to Electricity (steam engine to electricity at end consumer price)	\$4,000
	VIP with Feces and Biomass (steam engine to electricity at end consumer price with 95% Biomass)	\$70,000
Non-Fuel Products	BSFL	\$30,000
	Compost	\$16,000

**Gross Margin of Feces Briquette Production** 

## Sales Market Segments

## SUSTAINABLE CHARCOAL SUBSTITUTE

EcoFlame<sup>60</sup> briquettes are the ideal fuel for:

**Space Heating & Ambience** 

Dependable Produced consistently in Naivasha for over 3 years

Warming Food & Water

**Cooking & Grilling** 

Eco-Friendly

Made from recycled waste poducts without killing trees

High-Perfomance Last longer and burn cleaner than any other solid fuel
