

# THE ROLE OF GREEN INFRASTRUCTURE INVESTMENTS

Eric Soubeiran  
Global Nature & Climate Director

*Terragr'Eau*, a collective methanizer to protect the watershed and foster the sustainability of local farming

29 August 2017

# Protecting the water resource, a priority

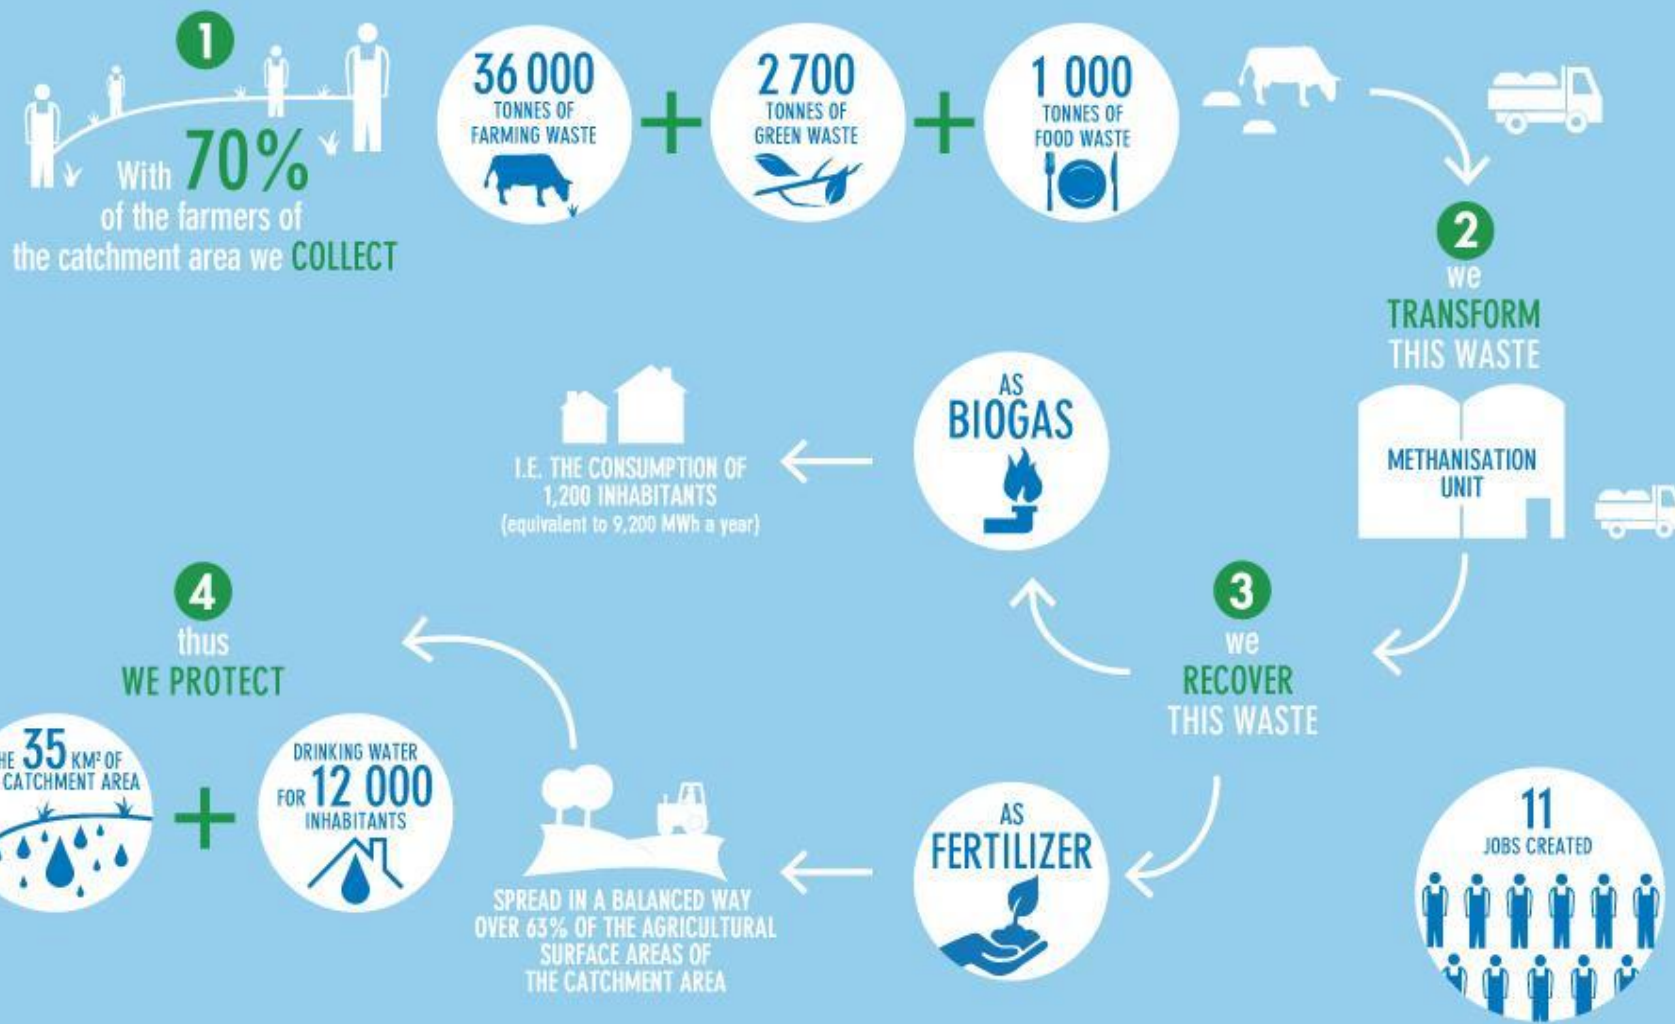

**41 farmers, 16 towns and the company EVIAN joined forces and work hands in hands to find solutions to the challenges met by the territory since 1992**

**Their common objectives are to:**

- Preserve the Evian natural mineral water and the drinking water consumed by over **10,000 residents**
- Protect **1,300 direct jobs** that cannot be performed elsewhere and several hundred indirect jobs
- Allow the production of 1.6 billion bottles of Evian every year, i.e. **7 million per day.**

# Terragr'Eau : AGRICULTURAL METHANISATION DEDICATED TO PROTECTING WATER

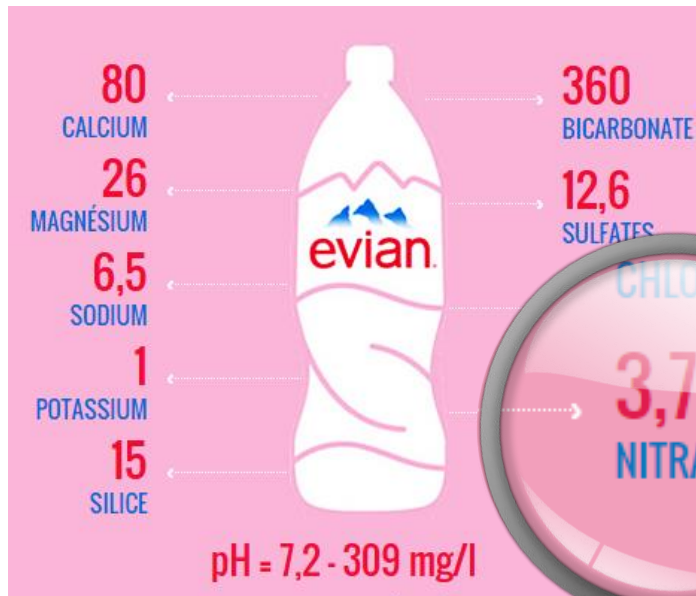

How it works ?

## 2 main outcomes

### 1) Maintaining farming on the impluvium

→ To guarantee **the infiltration surfaces** needed to refill the evian spring

### 2) Managing risks of nitrate pollution from fertilizers

→ By improving crops and grasslands **fertilization practices**

# And international recognition

Evian® water catchment area certified as a Ramsar Site  
("Impluvium d'Evian" Site no. 1833).

The first natural spring water infiltration zone recognized as a wetland of international importance.

Soon to come:
